

ABHINAV GUPTA

Software Development Engineer with strong object-oriented design fundamentals, hands-on experience in Java/Spring Boot backend systems, MERN stack, and Blockchain. Practiced in Agile development workflows. Deployed production systems end-to-end. 500+ DSA problems solved; Codeforces Pupil (rating 1383).

TECHNICAL SKILLS

Languages: Java, C, C++, Python, JavaScript, TypeScript, Solidity

Frontend: React.js, Next.js, Tailwind CSS, HTML, CSS

Backend & Databases: Spring Boot, Spring Cloud, Apache Kafka, Node.js, Express.js, REST APIs, JWT, PostgreSQL, MongoDB, MySQL, Neo4j, Redis

Blockchain: Solidity, Web3.js, MetaMask, Ganache, Truffle

Cloud & DevOps: AWS (EC2, S3, CloudFront), Docker, Kubernetes, CI/CD, Git, GitHub, Linux, Postman

CS Fundamentals: Data Structures & Algorithms, OOP & Design Patterns, LLD/HLD, Computer Networks, Agile / Scrum

WORK EXPERIENCE

Software Developer Intern — Codeeater

Remote, Delhi Aug 2023 – Oct 2023

JavaScript | MERN Stack | Solidity | Web3.js | Agile | Linux

- Designed and deployed 3 Ethereum smart contracts in Solidity using object-oriented design principles, covering 6+ on-chain operations (listing, bidding, ownership transfer); wrote unit tests on Ganache achieving full function-level test coverage before mainnet deployment.
- Integrated smart contracts with React frontend via Web3.js and MetaMask; applied gas-optimisation techniques (loop refactoring, storage packing, re-entrancy guards) reducing estimated gas costs by ~15%.
- Worked in an Agile team, participating in sprint planning and daily stand-ups; managed version control via Git on Linux, maintaining clean branch strategy across feature and release branches.

PROJECTS

Nexora — Distributed Professional Social Network | github.com/ABHINAVX03/nexora | nexoranetwork.site

Java 21 | Spring Cloud | Kafka | Neo4j | Redis | AWS

- Architected a distributed professional social network on Java 21 Virtual Threads and Spring Cloud, so I/O-heavy workloads such as feeds, messaging and notifications handle high concurrency without exhausting platform threads.
- Modelled the user network in a Neo4j graph database to traverse 1st/2nd-degree connections directly, avoiding the costly self-joins a relational schema would need for connection lookups.
- Decoupled activity feeds and notifications with Kafka event streams: services publish events and consumers process them asynchronously, keeping user-facing requests fast and isolating failures between components.
- Benchmarked the platform for 100k+ concurrent users at a 0% error rate; layered PostgreSQL with Redis caching for hot reads, WebSocket (STOMP) for real-time messaging, and AWS S3 + CloudFront CDN for edge asset delivery. Live at nexoranetwork.site.

BookKaro — Ride-Hailing Platform | github.com/ABHINAVX03/Book_Karo-backend-Spring-boot- | book-car-frontend.vercel.app

Java | Spring Boot | React | PostgreSQL | Docker | CI/CD

- Architected a production-grade ride-hailing REST API using OOP and a layered Controller–Service–Repository design in Spring Boot 3.3 — 5 JPA entities and 10+ endpoints covering the full ride lifecycle (request, accept, start, end, payment, rating).
- Kept controllers thin by placing ride-lifecycle business rules in the service layer and persistence behind Spring Data JPA repositories, keeping each layer independently readable and testable.
- Secured all endpoints with JWT + Spring Security for stateless authentication; resolved a CORS production outage between the Railway-hosted backend and Vercel-hosted frontend by reconfiguring the Security filter chain, restoring service in under 2 hours.
- Containerised the backend with Docker and set up CI/CD so changes deploy automatically to Railway (API) and Vercel (React frontend).

CP Sync — Contest Aggregation & Calendar Sync Engine | github.com/ABHINAVX03/cp-sync-backend- | cp-sync-frontend.vercel.app

Java 21 | Spring Boot | React | PostgreSQL | Google Calendar API

- Built a contest-aggregation engine that normalises upcoming rounds from Codeforces, LeetCode, CodeChef, and AtCoder, each with its own data format and time zone handling, into a single Spring Boot Data JPA dashboard.
- Implemented scheduled fetch jobs, deduplication so the same contest never appears twice, and rate-limiting on outbound calls to respect each external API's limits.
- Integrated Google Calendar OAuth2 for idempotent one-click contest sync, so re-syncing never creates duplicate calendar events.
- Built a React dashboard for browsing and managing aggregated contests; deployed the backend on AWS EC2.

EDUCATION

Master of Computer Applications (MCA)

IIIT Vadodara (Indian Institute of Information Technology)

2025 – 2028

GPA: **8.5 / 10** Gandhinagar, Gujarat

Bachelor of Computer Applications (BCA)

Guru Gobind Singh Indraprastha University (GGSIPU)

2021 – 2024

GPA: **9.2 / 10** Rohini, Delhi-NCT

ACHIEVEMENTS & CERTIFICATIONS

- Participated in multiple hackathons, including Smart India Hackathon (SIH) and HACKOUT, building and presenting prototype solutions in cross-functional teams under tight deadlines.
- Coding Society Representative at GGSIPU — organised 3 inter-college coding contests using Agile sprint methodology, coordinated 40+ student programmers.
